```

This project aims at detecting plagiarism in documents across various platforms.

- 1) The base algorithm for the project is Rabin-Karp algorithm.
- 2) The project comprises of a local dictionary for filtering the text under test to achieve context freedom to some extent.
- 3) The project is aimed to be developed across mobile and PC platforms to aid in plagiarism detection.
- 4) This is an open source project and its git repository can be viewed through following link:
<https://github.com/kshiti-j-srv/plagiarism-detector.git>
 Suggestions and improvements in the project are welcome.
